

ArcelorMittal Tubular Products Karviná

ArcelorMittal Tubular Products Karviná: Investments in Full Swing

Despite challenging market conditions, ArcelorMittal Tubular Products Karviná remains active in investment in production. The installation of a packaging line completed the modernization of rolling line No. 10, which will be further expanded with automatic strapping. Rolling line No. 7 has been equipped with rolling stands, enhancing the quality of tube and profile production. The new stands will cover the entire portfolio of individual manufactured profiles and introduce production of higher quality. Other planned investments include a new compressor, the reconstruction of a substation, and projects for workplace safety.

Automation of storage solves bundle localization issues

The production team at ArcelorMittal Tubular Products Karviná collaborates with the Technical University of Ostrava on a new project for the automation of storage. The project addresses issues with localizing bundles of steel profiles in warehouses. The new solution will use the 3D position of the crane hook to identify and move bundles. The load detection system will simplify the handling process and increase warehouse efficiency.

Successfully defended certifications confirm long-term high quality

ArcelorMittal Tubular Products Karviná successfully underwent several external audits confirming the high quality of the management system and products. Audits covered areas such as quality, environment, and occupational safety. The company managed to defend the certificate for supplying pressure pipes to the Polish construction market from ZENOM and the KIWA certificate for deliveries to the Dutch market. The TZUS audit for products supplied to the EU construction industry and the TUV Nord audit for pipes intended for pressure equipment in the EU were also successful.

Karviná prepares for new challenges – expansion into the British market and maritime industry

ArcelorMittal in Karviná actively responds to new market requirements and prepares for expansion into new markets. It is gearing up for the transition of EU certificates to the British market and aims to undergo DNV certification for materials intended for shipbuilding.

Statement from the Karviná plant on the origin of products

Throughout 2023, customers have shown increased interest in the origin of products. ArcelorMittal Tubular Products Karviná confirms that it does not stock steel or iron products from Russia, Belarus, or occupied territories of Ukraine, in accordance with EU Council Regulation No. 833/2014 and its amendments effective from June 23, 2023.

Mind your body: Health and Safety week in Karviná

During Health and Safety Week, the Karviná company organized several events to support employee health. The main theme of this year's edition was physical health. The week full of shared activities kicked off with a traditional volleyball tournament. A lecture on regular physical activity and its impact on the mental well-being of middle-aged individuals also enjoyed great success.

First edition of Mr. Tube Race competition a success

As part of Health Week, the first edition of the Mr. Tube Race competition took place. A total of 56 employees were divided into eight teams and competed in four disciplines – both knowledge-based and sports. Nearly 60 other employees watched and cheered. The Transportation team emerged as the winner, receiving gift vouchers for workplace equipment and gift baskets, along with the second and third-place teams. All employees enjoyed a served lunch and refreshments throughout the day.

Smart cameras and audits enhance employee safety

ArcelorMittal Tubular Products Karviná conducts preventive internal audits focusing on various occupational safety aspects, from workplace orderliness to specific topics such as working at heights or ergonomics. The company also invests in gradually equipping forklifts with front and rear cameras and a smart camera system called LUIS, enhancing the safety of employees working in material handling environments.
