Seamless pipes are proposed in carbon and low-alloy steel with a diameter range of 168.3 to 406 mm and a wall thickness from 6.35 to 32mm. Technology used is 16" plug mill. Roman has API license since 1968.

Seamless tubes can be used in many applications or projects related to end-user business, including oil&gas, chemical, power generation, nuclear and conventional energy, machinery and construction, civil engineering.
